# 1 Executive Summary

---

Cardno has completed a Phase I Environmental Site Assessment (ESA) of the former K-Mart shopping center located at 5597 Buford Highway, Doraville, Georgia. The study property is herein referred to as "the subject site/property" or "the site." According to information provided by the City of Doraville Downtown Development Authority, the subject property consists of an approximate 13 acre tract comprised developed with a vacant shopping center. (**Figures 1 and 2**). Photos of the subject property and surrounding properties taken during the site visit are provided in **Appendix A**. This assessment was performed under and was funded by the City of Doraville Environmental Protection Agency (EPA) Brownfield Assessment Grant. The subject site was selected for assessment as it was identified as a catalyst site within the City of Doraville.

This assessment was performed to satisfy the requirements of the Client (City of Doraville Downtown Development Authority) and their assign(s) with respect to potential environmental impairment and liabilities associated with the property due to contamination by hazardous substances, controlled substances or petroleum products on or near the site. **This Phase I Environmental Site Assessment generally follows the scope of ASTM Designation: E 1527-13 – Standard Practice for Environmental Site Assessments.** This report meets the general requirements for conducting all appropriate inquiry into the previous ownership, uses, and environmental conditions of a property, as specified in 40 CFR Part 312, Standards and Practices for All Appropriate Inquiries. Furthermore, this work was conducted by or under the responsible charge of an environmental professional as defined in 40 CFR §312.10.

*ASTM Standard Practice E1527-13* defines a Recognized Environmental Condition (REC) as:

"The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment, 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. The term is not intended to include *de Minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

*ASTM Standard Practice E1527-13* defines a Controlled Recognized Environmental Condition (CREC) as:

"A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

*ASTM Standard Practice E1527-13* defines a Historical Recognized Environmental Condition (HREC) as:

"A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls."

## 1.1 Findings and Conclusions

Cardno has performed this Phase I Environmental Site Assessment (ESA) of the property in conformance with the scope and limitations of ASTM Standard Practice E1527-13. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed a series of recognized environmental conditions (RECs) in connection with the subject property:

Based on this Phase I ESA results, several recognized environmental conditions were documented and further Phase II ESA testing activities and/or other actions are recommended at this time.

- The subject site supported auto repair maintenance operations since its development in 1970 until its vacancy in the early 2010. The facility utilized one 1,000-gallon steel underground storage tank (UST) for used oil which was installed in 1970 and removed from the ground in 1990. Maintenance activities and the former UST together have the potential to affect the subject site. There is potential for a release from these activities that may require additional investigation and management.
- Two up-gradient adjacent gas stations were identified as leaking underground storage tanks (LUSTs). Both gas stations began operations as early as the 1960s, with one (BP Foodmart)

still in operation and the other (Exxon #45787) being closed in 1992. While both releases have achieved no-further-action-required status with the Georgia Environmental Protection Division (EPD), there is still potential for the past releases or a new release from these properties to have impacted the subject site that may require additional investigation and management.

- An up-gradient adjacent auto repair facility (Big 10 Tires / Pep Boys) was identified since the 1980s. There is potential for a release from this property to have impacted the subject site that may require additional investigation and management.

Based on this Phase I ESA result, several non-scope issues were identified and documented and further testing activities and/or other actions are recommended at this time.

- The former K-Mart building was constructed prior to 1980 and contained several suspect asbestos containing materials (ACM). Suspect materials include floor tiles, wall board and joint compound, mastic, ceiling tiles, caulk, roof shingles, etc. Prior to the disturbance of these materials, it is recommended that they be tested and abated for any ACM.
- The former K-Mart building was constructed prior to 1972 and contains suspect lead-based paint (LBP) coated surfaces. Prior to the disturbance of these materials, it is recommended that this material be tested and abated as appropriate.

*Please note: This is a cursory summary of findings. The full report must be read in its entirety for a comprehensive understanding of the stated conclusions/recommendations*

## 2 Introduction

---

### 2.1 Purpose

The purpose of this Phase I ESA was to identify recognized environmental conditions in connection with the property at the time of the site reconnaissance. The scope of work for this Phase I ESA may also include certain potential environmental conditions beyond the scope of *ASTM Standard Practice E1527-13*. This report documents our findings, opinions and conclusions.

### 2.2 Detailed Scope of Services

This Phase I ESA was conducted in general accordance with the *ASTM Standard Practice E1527-13*, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to *ASTM Standard Practice E1527-13* are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the property through a review of referenced sources such as available topographic maps and geologic, soils and hydrogeological reports.
- Usage of the property, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.
- Observations and interviews regarding current property usage and conditions including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes and wastewater.
- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on or at the property.
- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the property.
- Potential for subsurface vapor migration in, on or at the property.

No additional investigations or other quantitative/qualitative testing was performed as part of this assessment, and no other work was performed as part of this assessment that was not required by the *ASTM Standard Practices E1527-13*. These non-scope issues include, but are not limited to, the following: Asbestos-Containing Building Materials, Radon, Lead-Based Paint, Lead in Drinking Water, Wetlands, Regulatory Compliance, Cultural and Historic Resources, Industrial Hygiene, Health and Safety, Geotechnical Evaluation, Sinkhole Evaluation, Ecological Resources, Endangered Species, Indoor Air Quality, Vapor Intrusion, Biological Agents, and Mold.

### 2.3 Significant Assumptions

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. It is possible that unreported disposal of waste or illegal activities impairing the environmental status of the property may have occurred which could not be identified.

The conclusions and recommendations regarding environmental conditions that are presented in this report are based on a scope of work authorized by the Client. Please note however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground. Cardno also assumes that the Client and other interested parties will read this report in its entirety.

## **2.4 Limitations, Exceptions, Deviations and/or Data Gaps**

Cardno has prepared this Phase I ESA report using reasonable efforts to identify recognized environmental conditions associated with hazardous substances or petroleum products in, on or at the property. Findings contained within this report are based on information collected from observations made on the day (November 14, 2017) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

The *ASTM Standard Practice E1527-13* recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- *Uncertainty Not Eliminated* – A Phase I ESA cannot completely eliminate uncertainty regarding the potential for recognized environmental conditions in connection with any property.
- *Not Exhaustive* – A Phase I ESA is not an exhaustive investigation of the property and environmental conditions on such property.
- *Past Uses of the Property* – Phase I requirements only require review of standard historical sources at five-year intervals. Therefore, past uses of property at less than five-year intervals may not be discovered.

Users of this report may refer to *ASTM Standard Practice E1527-13* for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews, and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other property construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

Cardno makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, Cardno is not responsible for consequences or conditions arising from facts not fully disclosed to Cardno during the assessment.

An independent data research company provided the government agency database referenced in this report. Information on surrounding area properties was requested for approximate minimum search distances and is assumed to be correct and complete unless obviously contradicted by Cardno's observations or other credible referenced sources reviewed during the assessment. Cardno shall not be liable for any such database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain or produce accurate or complete records.

Cardno makes no warranty, guarantee or certification regarding the quality, accuracy, or reliability of any prior report provided to Cardno and discussed in this Phase I ESA report. Cardno expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to Cardno and discussed in this Phase I ESA report.

Cardno used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the property during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records, and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, vegetation, paving, construction activities, stored materials, and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment, which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to the *Financial Accounting Standards Board (FASB) Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act* or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of Cardno.

Cardno did not act as a professional title insurance or land surveyor firm as part of this investigation, and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

The Environmental Professional Statement in Section 1.1 of this report does not "certify" the findings contained in this report and is not a legal opinion of such Environmental Professional. The statement is intended to document Cardno's opinion that an individual meeting the qualifications of an Environmental Professional was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the Environmental Professional were performed in conformance with the standards and practices set forth in 40 CFR Part 312 per the methodology in *ASTM Standard Practice E1527-13* and the scope of work for this assessment.

Per *ASTM Standard Practice E1527-13, Section 6, User Responsibilities*, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of recognized environmental conditions in connection with the property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for Landowner Liability Protections (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Cardno makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

In accordance with the *ASTM Standard Practice E1527-13*, this report is presumed to be valid for a six-month period. If the report is older than six months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge and (5) environmental liens search. Reports older than one year may not meet *the ASTM Standard Practice E1527-13* and therefore, the entire report must be updated to reflect current conditions and property-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

No significant deviations or data gaps likely to affect the environmental professional's ability to identify RECs were observed or encountered during preparation of this report.

## **2.5 Special Terms and Conditions (User Reliance)**

**This report is for the use and benefit of, and may be relied upon by the City of Doraville Downtown Development Authority, as well as any of their affiliates respective successors and assigns, in connection with a commercial real estate transaction involving the property, and in accordance with the terms and conditions in place between Cardno and the Client for this project.** Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the property that were not discovered within the authorized scope of the assessment. Any use by or distribution of this report to third parties, without the express written consent of Cardno is at the sole risk and expense of such third party.

Cardno makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either expressed or implied.

## 5 Records Review

The purpose of the records review is to obtain and review records that will help identify RECs in connection with the property. Some records reviewed pertain not only to the property, but also to properties within an additional approximate minimum search distance in order to help assess the likelihood of problems from migrating hazardous substances or petroleum products. Unless stated otherwise the approximate minimum search distances used below were as specified in *ASTM Standard 1527-13*.

### 5.1 Standard Environmental Record Sources

The regulatory agency database radius report discussed in this section, provided by GeoSearch, Inc. (GeoSearch), was reviewed for information regarding reported use or release of hazardous substances and petroleum products on or near the property. Unless otherwise noted, the information provided by the regulatory agency database report and other sources referenced in this report, were considered sufficient for recognized environmental condition (REC), controlled recognized environmental condition (CREC), historical recognized environmental condition (HREC) or de minimis condition determinations without conducting supplemental agency file reviews. Cardno also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the property, based on the partial street address, city, or zip code. Any unmappable site that was identified by Cardno as being within the approximate minimum search distance from the property, based on the site reconnaissance and/or cross-referencing to mapped listings is included in the discussion within this section. The complete regulatory agency database report may be found in **Appendix D**. The following is a summary of the findings of the database review:

Thirty-two (32) sites located within a ½ mile radius of the target area, which includes the subject site, were identified during the database search. Several of the listed facilities represent a REC/CREC/HREC environmental concern due to distance, anticipated direction of groundwater flow, and/or anticipated risk of contamination. Further details regarding these properties listed on the GeoSearch database that are within a ½ mile of the subject property are provided below. Fewer than twenty sites are listed because a location may appear on more than one environmental database.

- **K-MART #4451**

Location: 5597 Buford Highway  
Subject Site

Summary: According to the GeoSearch database records, this facility was listed as an underground storage tank (UST). The facility utilized one 1,000-gallon used oil UST constructed of steel and installed in April 1970, likely during the construction of the K-Mart building. Reportedly this tank was used for the storage of used oil during the maintenance of vehicles. According to Georgia EPD records, the tank was reported to have been removed from the ground in January 1990; however, the Georgia Environmental Protection Division (EPD) had no records with regards to the location of this former tank or if any soil or groundwater samples were collected in conjunction with the closure. Based on

the length of operation and lack of data regarding the UST closure, there is potential to have impacted soil, vapor, and groundwater at the subject site.

According to the GeoSearch database records, this facility is listed as a Resource Conservation and Recovery Act (RCRA) Non-Generator of hazardous waste for the storage and handling of pharmaceutical waste. No records were available for review with the Georgia EPD; however, no violations or releases have been reported from its historic use as a RCRA generator.

The facility is listed in the GeoSearch database records search as a Georgia Facility Registry System (FRSGA) site. The FRS is an EPA database that identified facilities or sites of potential environmental interest. Likely this facility is listed on the FRS due to it being listed on the UST and RCRA databases.

- **Exxon #45787**

Location: 5593 Buford Highway  
Adjacent northwest

Summary: The facility is located at the current location of the First Intercontinental Bank and is listed in the GeoSearch database records as the location of a leaking underground storage tank (LUST) site. Tanks were reportedly installed in 1985 and a release was reported in 1993 during an initial closure assessment for the USTs. During the assessment, soil sampling indicated elevated concentrations of petroleum contaminants adjacent the tank pit. The tanks were removed in November 1993, and an additional 272 tons of contaminated soil was removed from the tank pit and beneath the dispensers down to a maximum depth of 23 feet below ground surface (bgs). Multiple confirmatory soil samples collected at the bottom of the excavation pit identified no detectable concentrations of petroleum contamination. Groundwater was not encountered during the initial assessment nor during the tank removal, and no groundwater samples were collected. Based on the delineation of soil contamination and lack of water receptors, the Georgia EPD issued a No Further Action (NFA) determination for this facility in May 1995. This facility is located up-gradient and groundwater flow would likely be southeast towards the subject site. Based on the length of operation and lack of groundwater sampling data, there is potential for this facility to have impacted groundwater at the subject site.

According to the GeoSearch database records, this facility is listed as a Resource Conservation and Recovery Act (RCRA) Non-Generator of hazardous waste for the storage and handling of petroleum contaminants, particularly benzene. No records were available for review with the Georgia EPD; however, no violations or releases have been reported from its historic use as a RCRA generator.

- **BP Foodmart**

Location: 5625 Buford Highway  
Adjacent N of subject site

Summary: The facility is listed in the GeoSearch database records as the location of a leaking underground storage tank (LUST) site. Tanks were reportedly installed

in 1985 and a release was reported in October 2003 after a reported failure in the UST system. According to Georgia EPD records, the facility underwent corrective action from 2004 until 2012 in which 10 monitoring wells were installed and 13 monitoring events were conducted. Light non-aqueous phase liquid (NAPL) or free product was identified in two monitoring wells, MW-4 and MW-6, in numerous monitoring events. From 2003 until 2012, five High Vacuum Extraction Events (HVE) were conducted extracting over 1,200 gallons of petroleum hydrocarbons from the groundwater of the facility. The last groundwater sampling event, conducted after a 108-hour HVE event, identified no free product and low concentrations of petroleum contamination in groundwater. Based on the low groundwater contamination and lack of water receptors, the Georgia EPD issued a No Further Action (NFA) determination for this facility in March 2013. This facility is located up-gradient and groundwater direction was identified to flow south and towards the subject site. The two monitoring wells that consistently identified free product, MW-4 and MW-6, were located on the south portion of the property and closest to the subject site. No monitoring wells were located on the subject site, and no groundwater samples were ever collected on the subject site. The contamination from this previous release was never delineated to the south, and it is unknown if this contamination has impacted the subject site. Based on the lack of delineation of the release to the south, there is potential for this facility to have impacted groundwater at the subject site.

According to the GeoSearch database records, this facility is listed as a Resource Conservation and Recovery Act (RCRA) Non-Generator of hazardous waste for the storage and handling of petroleum contaminants, particularly benzene. No records were available for review with the Georgia EPD; however, no violations or releases have been reported from its historic use as a RCRA generator.

- **Doraville United States Postal Service**

Location: 4700 Longmire Extension  
Adjacent NE of subject site, across from Longmire Extension

Summary: The facility is listed in the GeoSearch database records search as the location of a leaking UST facility. According to Georgia EPD records, the facility utilized two 12,000-gallon gasoline USTs installed at an unknown date and removed August 1997. A release was reported from this facility during in April 1995 after an investigation identified petroleum contamination in soil adjacent the USTs. Between 1997 and 2004, 14 monitoring wells were installed and 11 groundwater monitoring events were conducted. An HVE event was conducted in October 2003, and the latest groundwater sampling event conducted in September 2004 identified low concentrations of petroleum contaminants. Based on the low contaminant concentrations, the EPD issued a NFA determination in October 2004. This facility is located up-gradient, and groundwater direction was determined to be southeast and towards the subject site. However, the source of the contamination (the former USTs) is northwest of the building, approximately 300 feet from the subject site. In addition, during the corrective action investigation, the closest monitoring wells to the subject site have never contained any detectable concentrations of petroleum contaminants. Based on the issuance of a NFA determination, the removal of

the source contamination, and the lack of contamination identified near the subject site, this facility is not considered to have the potential to have impacted soil, vapor, or groundwater at the subject site.

- **JC Penny / Big 10 Tires**

Location: 5600 Buford Highway  
Approximately 0.02 miles NW of the subject site, across Buford Highway

Summary: This facility is the location of the current shopping center and originally included the adjacent Pep Boys facility. The facility is listed in the GeoSearch database records search as the site of a LUST. According to Georgia EPD records, the site historically supported JC Penny with an outparcel which included the Big 10 Tire Store since the early 1980s. The Big 10 Tire store utilized two 10,000-gallon gasoline and one 550-gallon used oil USTs. The tanks were removed in 1993, and during the removal petroleum contamination was identified in the soil underlying the tanks. Based on the low contaminant concentrations and lack of nearby water receptors, the Georgia EPD issued a NFA status in February 1994. In November 2001, during construction activities (the development of the current shopping center), product lines and petroleum contamination was identified in the underlying soil. Soil samples were collected and minor contamination was identified in shallow soil. The Georgia EPD issued a NFA status of this additional contamination in December 2001. This facility is located up-gradient of the subject site. No groundwater samples were collected during either investigation. Based on the length of operation and lack of groundwater sampling data, this facility is considered to have the potential to have impacted groundwater at the subject site.

- **Waters Shell Service**

Location: 5632 Buford Highway  
Approximately 0.03 miles N of subject site, across Buford Highway

Summary: This facility is the location of the current Zaxby's Restaurant. The site is listed in the GeoSearch database records search as the location of a leaking UST release in 2013. According to Georgia EPD records, the site historically supported a Shell gas station in the 1960s. A Phase II soil and groundwater investigation identified Methyl-tert butyl ether (MTBE), a gasoline additive, in one groundwater sample. All other petroleum contaminants in soil and groundwater were below detection limits. Based on the low contaminant concentrations, the Georgia EPD issued a NFA determination in April 2013. Based on the NFA status and low contaminant concentrations, this facility is not considered to have the potential to have impacted soil, vapor, or groundwater at the subject site.

- **Chevron USA, Inc. #40738**

Location: 5499 Buford Highway  
Approximately 0.16 miles SW of the subject site

Summary: The facility is listed in the GeoSearch database records search as the site of a LUST. According to the Georgia EPD records, the facility removed four USTs in

September 1991 and the closure identified minor petroleum contamination in the underlying soil and in groundwater. The Georgia EPD requested additional investigation; however, a dispute over the ownership of the tanks delayed any further action. Due to the low contaminant concentrations and lack of nearby water receptors, the Georgia EPD issued a NFA determination for this facility in May 2008. This facility is located cross-gradient of the subject site, and groundwater direction was determined to flow to the south and away from the subject site. Based on the NFA status, distance, and known groundwater flow direction, this facility is not considered to have the potential to have impacted soil, vapor, or groundwater at the subject property.

- **Quicktrip #848**

Location: 5500 Buford Highway  
Approximately 0.19 miles WSW of subject site

Summary: The facility is listed in the GeoSearch database records search as a leaking UST (LUST) site. According Georgia EPD records, the facility had one release in September 1999 and another in October 2012. After several years of corrective action, the older release was issued a NFA determination in 2003. The recent release was reported after the closure of three USTs when soil and groundwater contamination was identified. The Georgia EPD contributed this contamination to the previous release and issued a NFA determination in October 2012. This facility is located cross-gradient, and groundwater flow direction as determined to be towards the south and away from the subject site. Based on the distance, NFA status, and groundwater flow direction, this facility is not considered to have the potential to have impacted soil, vapor, or groundwater at the subject property.

- **Doraville Plaza**

Location: 5706 Buford Highway  
Approximately 0.25 miles NNE of subject site

Summary: The facility is listed in the GeoSearch database records search as the site of a Georgia Brownfields facility. It is unknown the source of contamination as Georgia EPD records were not readily available for review during this investigation. However, this facility is located cross-gradient of the subject site. Based on the distance and the intervening topography, this facility is not considered to have potential to have impacted soil, vapor, or groundwater at the subject site.

Summary: The facility is listed in the GeoSearch database records search as the site of a LUST. This facility is located down-gradient of the subject site. Based on the distance and the intervening topography, this facility is not considered to have potential to have impacted soil, vapor, or groundwater at the subject site.

- **Grady Medical Clinic**

Location: 5461 Buford Highway  
Approximately 0.36 miles WSW of subject property

Summary: The facility is listed in the GeoSearch database records search as the site of a Georgia Historic Non-Hazardous Site Inventory (HSI) facility. This facility is located down-gradient of the subject site. Based on the distance and the intervening topography, this facility is not considered to have potential to have impacted soil, vapor, or groundwater at the subject site.

## 5.2 Physical Setting Sources

A GeoSearch Physical Setting Map report is included in **Appendix E**. According to this report, surficial sediments at the site are underlain by a granite and granite gneiss stratified sequence.

The 2014 USGS 7.5-minute series topographic map of Chamblee, Georgia quadrangle shows the northwest and southeast portions of the site moderately sloping towards a tributary of North Fork Peachtree Creek, with the central portion of the site flat. Likely the central portion of the site was graded during the construction of the existing building. Topography ranges from approximately 980 to 1,020 feet above mean sea level (MSL). Based on map topography contours, the inferred primary direction of groundwater flow for the vicinity of the subject site is determined to be generally southeast towards the tributary of North Fork Peachtree Creek. A USGS Topographic Map is included in **Figure 1**.

A copy of the soil survey inquiry results obtained via the web-based USDA National Resources Conservation Survey is included as **Appendix E**. According to the US Department of Agriculture Natural Resources Conservation Service inquiry, the site is situated in an area primarily comprised of the following soil types:

- Cecil sandy loam, 6-10% slope; consists of very deep, well drained moderately permeable soils on ridges and side lobes of the Piedmont uplands.
- Urban land; consists of areas that have been altered by cutting, filling, and shaping.

## 5.3 Historical Records Sources

### 5.3.1 Aerial Photographs, Topographic Maps, City Directories, and Sanborn Maps

The objective of consulting historical sources is to determine the likelihood of past uses having led to recognized environmental conditions in connection with the property. A review was conducted of historical aerial photographs (**Appendix F**) and Topographic Maps (**Appendix G**) obtained from GeoSearch. For ease of review, **Figures 4a-4p** are also provided to show the approximate property boundary on a representative selection of these historical aerial photos.

Historical City directories are referenced for study areas which help identify changes in land use based on the type of businesses that occupied the subject site and surrounding area. The type of business, such as automotive, dry cleaning, gasoline/service stations, etc. are indicative of the possible presence of hazardous substances or petroleum products. Historical use information describing the subject property and nearby properties was obtained from GeoSearch from 1953 to 2016. The detailed GeoSearch City Directory report is included in **Appendix H**.

Sanborn Fire Insurance Maps have been produced since the late 1800's to provide information relative to fire hazards on insurable property. These maps often indicate locations of underground and aboveground gasoline tanks, storage facilities for flammable chemicals, such as dry cleaners, paint shops, maintenance and garage facilities, as well as historical information on occupants of buildings, unavailable through other sources. Production of these maps typically was limited to the immediate vicinity of downtown urban areas. The subject site was not identified any available Sanborn maps. Therefore, Sanborn maps were not available for the area where the subject site is located.

Findings of review of the historical aerial photos and city directory are chronologically summarized in the following table:

## 6 Site Reconnaissance

---

The following is a summary of visual and/or physical observations of the property noted during Cardno's visits to the site on November 29 and 30, 2017. Representative photographs can be found in **Appendix A**.

### 6.1 Methodology and Limiting Conditions

Douglas Strait, an Environmental Professional and Professional Engineer with Cardno, conducted the site reconnaissance on November 29 and 30, 2017. The site reconnaissance consisted of visual and/or physical observations of the property and improvements; adjoining sites as viewed from the property; and, the surrounding area based on visual observations made during the trip to and from the property.

No limiting conditions were identified during the site reconnaissance, and all exterior and interior areas were inspected.

### 6.2 Hazardous Substance Use, Storage, and Disposal

Cardno did not observe the use, storage or disposal of hazardous substances, including hazardous wastes on the property.

Historically the site supported an auto repair operations since its development in 1970 and likely utilized motor oils, coolants, degreasers, paints, and other automotive chemicals. The exact chemicals used, the storage of these chemicals, and their disposal is unknown.

### 6.3 Underground Storage Tanks (USTs)

Historically one 1,000-gallon used oil UST was utilized at the subject site from 1970 until 1990. No vent pipes, dispensers, or other physical evidence was identified during Cardno's site reconnaissance. It is likely the UST was located in the vicinity of vehicle maintenance area in the southwest portion of the former K-Mart building.

### 6.4 Aboveground Storage Tanks (ASTs)

Cardno did not observe any aboveground storage tanks.

### 6.5 Other Petroleum Products

Cardno did not observe any other petroleum products.

### 6.6 Polychlorinated Biphenyls (PCBs)

Cardno observed three pole-mounted transformers on power poles along the southeast boundary and a fourth pole-mounted transformer along the southwest boundary of the subject site. These transformers appeared to be in good condition with no evidence of releases. The PCB status of these transformers is unknown.

Historically the site supported an auto repair operations since its development in 1970. Several auto repair bays were noted on the southwest portion of the site, and in the interior there were several locations of possible in-ground hydraulic lifts. The hydraulic fluid in the lifts from this era potentially contained PCBs.

## **6.7 Unidentified Substance Containers**

One five-gallon bucket was identified in a pile of household refuse located on the southwest portion of the site. This container appeared to be empty and was labeled as containing joint compound for sheet rock. No evidence of contamination or releases was noted from this container.

Cardno observed no other unidentified substance containers.

## **6.8 Nonhazardous Solid Waste**

Cardno observed no dumpsters for solid waste accumulation. Two piles of household refuse and construction debris was noted. One pile along the entrance from North Dekalb Drive and the other on the northeast portion of the paved area, northeast of the on-site building. As mentioned above, only one empty five-gallon bucket was identified in the waste pile on the southwest portion of the site. No other chemicals or hazardous waste was identified in either pile, and no evidence of contamination was noted.

## **6.9 Wastewater**

According to Mr. Ashish Bagle, representative of the current owner and purchaser, the entire site is supplied by sanitary sewerage through the local municipality. No wastewater sources are currently generated because the facility is vacant. Formerly, wastewater sources were generated through the bathrooms, sinks, and kitchen of the on-site building. Several floor drains were noted throughout the building, in the bathrooms and in the kitchen area. No floor drains were noted in the auto repair area, and no other wastewater was generated on the site.

## **6.10 Waste Pits, Ponds and Lagoons**

Cardno did not observe evidence of waste pits, ponds, or lagoons in, on or at the property.

## **6.11 Drains and Sumps**

As noted above, Cardno observed several floor drains in the interior of the building. These floor drains likely discharged into the municipal sanitary sewer system.

Cardno did not observe evidence of any sumps in, on or at the property.

## **6.12 Septic Systems**

Cardno did not observe evidence of septic tank usage.

## **6.13 Storm Water Management System**

Cardno observed several storm water drains on the northwest and southwest boundaries of the site along Buford Highway and North Dekalb Drive. These improvements were likely constructed in the late 1960s with the development of the roads, and likely discharge into the municipal storm water system. One additional storm water drain was located in the parking lot in the southwest portion of the site, and was likely developed with the construction of the on-site improvements in 1970.

Any storm water not collected by these storm water drains flow overland and discharge into a tributary of North Fork Peachtree Creek located to the adjacent southeast of the subject site. This tributary originally ran across the site, but was likely diverted during the construction of the on-site improvements in 1970.

## **6.14 Wells**

Cardno did not observe any monitoring or active drinking wells on the subject property.

## 7 Subsurface Vapor Migration

---

Hazardous gases (vapor) from subsurface sources, such as contaminated soil or groundwater can migrate into residential, commercial, and industrial buildings with any foundation type, including basements, crawlspaces, or slabs. According to EPA guidance, three conditions must exist for hazardous vapors to reach the interior of buildings from the subsurface environment underneath or near a building. First, a source of hazardous vapors must be present in the soil or in groundwater underneath or near a building. Second, vapors must form and have a pathway along which to migrate toward the building. Third, entry routes must exist for the vapors to enter the building, and driving forces must exist to draw the vapors into the building.

Cardno considered the nature and extent of on-site and nearby sources of potential subsurface vapor migration by evaluating the current and historical usage of the property, the construction type and history, the physical setting, and the potential sources of subsurface vapor migration through the review of regulatory agency database information that was summarized in Section 5.0.

Based on the evaluation of the known or suspected releases of hazardous substances or petroleum products, their distance from the property, all potential pathways separated by roads with underground utilities, and soil type, et al, the following sites are potential subsurface vapor migration sources:

- On-site historic auto repair facility activities
- BP Foodmart gas station to the adjacent north.
- Former Exxon #45787 gas station to the adjacent northwest.
- Big 10 Tires / Pep Boys auto repair facility to the adjacent northwest.

No other potential subsurface vapor migration sources were determined to represent a recognized environmental condition.

## 8 Interviews

---

Cardno completed an interview questionnaire from an interview with the following people:

- Mr. Sam Banjee, Representative of Current Owner, Southern Gas Partners, LLC
- Mr. Ashish Bagle, Representative of End User, Macanley Investments

The completed All Appropriate Inquiry questionnaire based on the answers provided is provided in **Appendix C**.

In summary, Mr. Banjee indicated that the property has been owned or managed by Southern Gas Partners or its subsidiaries for approximately four years and that it has always been vacant during that time. No other information was provided.

In summary, Mr. Bagle indicated that the property was to be developed into a mixed use facility, and that it has been vacant for at least one year since his involvement. No other information was provided.

Cardno interviewed the following people during the course of this investigation:

- Ms. Luke Howe, City of Doraville Downtown Development Authority
- Attendants / sales representatives of various adjacent properties (Pep Boys, First Intercontinental Bank, BP Gas Station, Doraville Post Office, etc)

In summary, Mr. Howe and all adjacent property attendants/sales representatives reported no information that would indicate a recognized environmental condition related to the subject site.

## 9 Non-Scope Considerations

---

No collection or any other investigation for the purpose of determining the possible presence of asbestos, radon, mold, lead-based paint, and/or any other potential contaminants requiring specialized testing procedures or sampling were conducted during this investigation. No assessment was conducted for the possible presence or absence of wetlands and no determination is offered with regard to the suitability of the subject site for development or for any other specific use or purpose.

Notwithstanding these limitations, the applicability of certain environmental issues which are not covered by ASTM standards are still germane to a wide array of properties. The following is a summary of non-scope issues identified at the property on the day of the site visit.

### 9.1 Asbestos Containing Materials

No survey for asbestos-containing materials (ACMs) was conducted in the course of this assessment. However, since the on-site building was developed before the general discontinuation of asbestos in the construction industry (1980), there is a potential for ACMs to be present. During this investigation, a summary list of potential ACMs were noted.

The K-Mart shopping center building was constructed in 1970 and is a concrete masonry unit (CMU) building. Suspect ACMs identified in the building include the following:

- Vinyl floor tiles
- Ceramic floor tiles
- Underlying flooring mastic
- Window and door caulking
- Built-up roof membrane
- Roof tar/flashing
- Drywall / joint compound
- Pipe insulation
- Thermal insulation on HVAC system
- Drop ceiling tiles

The presence of asbestos in these suspect materials can only be confirmed with specialized testing following proper sampling protocols by a trained and licensed asbestos inspector.

### 9.2 Lead-Based Paint

No survey for lead-based paint (LBP) was conducted in the course of this assessment. However, since the on-site building was developed before the general discontinuation of LBP in the construction industry (1972), there is a potential for LBP to be present.

The presence of lead in the painted surfaces can only be confirmed with specialized testing following property sampling protocols by a trained and licensed LBP inspector.

## 10 Findings and Opinions

---

Cardno has completed a Phase I Environmental Site Assessment (ESA) of the subject property of the former K-Mart facility located at 5597 Buford Highway, Doraville, Georgia. This report has been prepared in general accordance with *40 CFR Part 312 Standards and Practices for All Appropriate Inquiries* and *ASTM Standard Practices E1527-13 for Environmental Site Assessments*.

### 10.1 Findings

Phase I ESA investigations seek to identify known or suspect RECs, historical RECs, and de minimis conditions. De minimis conditions are those that are judged to not present a material risk of harm to health or the environment.

This assessment has identified recognized environmental conditions (RECs) in connection with the subject property. The identified RECs consist of the following:

- **Former K-Mart – On-site auto repair operations**

Location: 5597 Buford Highway

The subject site performed auto repair operations from 1970 until the early 2010s. The site supported one used oil UST from 1970 until it was reportedly removed in 1990. Several in-ground hydraulic lifts were noted in the auto repair portion of the building. There is potential for the soil, groundwater, and soil vapor of the subject site to have been impacted from the historic auto repair operations and from PCBs in the hydraulic lifts.

- **BP Food Mart – Gas Station**

Location: 5625 Buford Highway

This facility has operated as a gas station since the 1960s and had a reported release in 2003 which received a NFA determination from the Georgia EPD in 2013. Due to the lack of delineation of groundwater contamination in the vicinity of the former K-Mart site, there is potential for groundwater at the subject site to have been impacted from this release and an additional release from the on-going fueling operations.

- **Exxon #45787 – Gas Station**

Location: 5593 Buford Highway

This facility has operated as a gas station from the 1960s until the early 1990s, and had a reported release in 1993 which was received a NFA determination from the Georgia EPD in 1995. Due to the lack of delineation of groundwater contamination in the vicinity of the former K-Mart site, there is potential for groundwater at the subject site to have been impacted from this release and an additional release from historic fueling operations.

- **Big 10 Tire / Pep Boys**

Location: 5600 Buford Highway

This facility has operated as an auto repair facility since the early 1980s with several USTs that were removed in 1993. This facility a reported release in

1993 which received a NFA determination in 1994. Due to the lack of delineation of groundwater contamination in the vicinity of the former K-Mart site, there is potential for groundwater at the subject site to have been impacted from this release and an additional release from the auto repair operations.

This assessment has identified non-scope considerations in connection with the subject property. The identified non-scope considerations consist of the following:

- The former K-Mart building was developed prior to 1980 and contains several suspect asbestos containing materials (ACM). Suspect materials include floor tiles, wall boarding and joint compound, mastic, ceiling tiles, caulking, roof membrane, etc. Prior to the disturbance of these materials, it is recommended that they be tested and abated for any ACM.
- The former K-Mart building was developed prior to 1972 and contains suspect lead-based paint (LBP). Prior to the disturbance of these materials, it is recommended that they be tested and abated.

## **10.2 Conclusions/Recommendations**

Based on this Phase I ESA data, Cardno recommends the following:

- Environmental soil and groundwater testing should be conducted at the location of the on-site former auto repair area to determine if there is contamination from historic auto repair activities and in-ground hydraulic lifts.
- Environmental soil and groundwater testing should be conducted on the northwest and north boundaries to determine if there is petroleum contamination originating from the adjacent off-site gas stations, BP Food Mart and Exxon #45787.
- Environmental soil and groundwater testing should be conducted on the northwest boundary to determine if there is contamination originating from the adjacent off-site auto repair facility, Big 10 Tires / Pep Boys.
- Prior to the disturbance of any building materials, a survey for ACM/LBP should be conducted. Any identified materials should be addressed in accordance with local, state, and federal regulations.

Dear Mr. Howe:

Cardno, Inc. ("Cardno") is pleased to present this cost proposal to conduct a Phase I and Phase II Environmental Site Assessment ("ESA") at the former K-Mart Store located at 5597 Buford Highway, Doraville. Due to urgency of completing this work before the end of 2017, Cardno initiated the required research and field activities based on email authorization dated 12/4/2017.

#### **SCOPE OF SERVICES**

The scope of services described below will be conducted in accordance with the Terms and Conditions of the Cooperative Agreement between the U.S. Environmental Protection Agency ("EPA") and the City and the approved Work Plan for the 2017 EPA Brownfields Assessment Grant, and in accordance with our agreement for projects funded under this federal grant.

#### **TASK 1: PHASE I ESA**

## All Appropriate Inquiry - User Questionnaire

The new All Appropriate Inquiry rule (40 CFR Part 312) requires that certain inquiries be made to the user (prospective purchaser) to help evaluate the environmental conditions of the property. In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user/prospective purchaser must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

### (1) Environmental cleanup liens that are filed against the site (40 CFR 312.25)

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? ☐ Y ☒ N Explain:

### (2) Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26)

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? ☐ Y ☒ N Explain:

### (3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)

As the user of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line business as the current or former occupants of the property or adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business. ☐ Y ☒ N Explain:

### (4) Relationship of the purchase price to the fair market value of the property (40 CFR 312.29)

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? ☒ Y ☐ N If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? ☐ Y ☐ N ☒ N/A Explain:

**(5) Commonly known or reasonable ascertainable information about the property (40 CFR 312.30)**

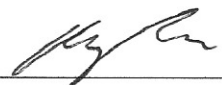

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional identify conditions indicative of releases or threatened releases? For example, as the user, ~~is~~

- a) Do you know the past uses of the property? ☒ Y ☒ N Explain: *KMart Dept. Store*
- b) Do you know of specific chemicals that are present or once were present at the property or adjacent properties? ☐ Y ☒ N Explain:
- c) Do you know of spills or other chemical releases that have taken place at the property or adjacent properties? ☐ Y ☒ N Explain:
- d) Do you know of any environmental cleanups that have taken place at the property or adjacent properties? ☐ Y ☒ N Explain:

**(6) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)**

As the user of this Phase I Environmental Site Assessment report, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property? ☐ Y ☒ N Explain:

I have completed this questionnaire in good faith and to the best of my knowledge.

### **AIRSAFS**

Aerometric Information Retrieval System / Air Facility Subsystem

VERSION DATE: 10/20/14

The United States Environmental Protection Agency (EPA) modified the Aerometric Information Retrieval System (AIRS) to a database that exclusively tracks the compliance of stationary sources of air pollution with EPA regulations: the Air Facility Subsystem (AFS). Since this change in 2001, the management of the AIRS/AFS database was assigned to EPA's Office of Enforcement and Compliance Assurance.

### **BRS**

Biennial Reporting System

VERSION DATE: 12/31/11

The United States Environmental Protection Agency (EPA), in cooperation with the States, biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The Biennial Report captures detailed data on the generation of hazardous waste from large quantity generators and data on waste management practices from treatment, storage and disposal facilities. Currently, the EPA states that data collected between 1991 and 1997 was originally a part of the defunct Biennial Reporting System and is now incorporated into the RCRAInfo data system.

### **CDL**

Clandestine Drug Laboratory Locations

VERSION DATE: 07/01/16

The U.S. Department of Justice ("the Department") provides this information as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. The Department does not establish, implement, enforce, or certify compliance with clean-up or remediation standards for contaminated sites; the public should contact a state or local health department or environmental protection agency for that information.

### **DOCKETS**

EPA Docket Data

VERSION DATE: 12/22/05

The United States Environmental Protection Agency Docket data lists Civil Case Defendants, filing dates as far back as 1971, laws broken including section, violations that occurred, pollutants involved, penalties assessed and superfund awards by facility and location. Please refer to ICIS database as source of current data.

### **EC**

Federal Engineering Institutional Control Sites

VERSION DATE: 08/03/15

This database includes site locations where Engineering and/or Institutional Controls have been identified as part

## ***Environmental Records Definitions - FEDERAL***

of a selected remedy for the site as defined by United States Environmental Protection Agency official remedy decision documents. A site listing does not indicate that the institutional and engineering controls are currently in place nor will be in place once the remedy is complete; it only indicates that the decision to include either of them in the remedy is documented as of the completed date of the document. Institutional controls are actions, such as legal controls, that help minimize the potential for human exposure to contamination by ensuring appropriate land or resource use. Engineering controls include caps, barriers, or other device engineering to prevent access, exposure, or continued migration of contamination.

### **ECHOR04** Enforcement and Compliance History Information

VERSION DATE: 08/26/17

The EPA's Enforcement and Compliance History Online (ECHO) database, provides compliance and enforcement information for facilities nationwide. This database includes facilities regulated as Clean Air Act stationary sources, Clean Water Act direct dischargers, Resource Conservation and Recovery Act hazardous waste handlers, Safe Drinking Water Act public water systems along with other data, such as Toxics Release Inventory releases.

### **ERNSGA** Emergency Response Notification System

VERSION DATE: 10/15/17

This National Response Center database contains data on reported releases of oil, chemical, radiological, biological, and/or etiological discharges into the environment anywhere in the United States and its territories. The data comes from spill reports made to the U.S. Environmental Protection Agency, U.S. Coast Guard, the National Response Center and/or the U.S. Department of Transportation.

### **FRSGA** Facility Registry System

VERSION DATE: 04/04/17

The United States Environmental Protection Agency's Office of Environmental Information (OEI) developed the Facility Registry System (FRS) as the centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. The Facility Registry System replaced the Facility Index System or FINDS database.

### **HMIRS04** Hazardous Materials Incident Reporting System

VERSION DATE: 08/30/17

The HMIRS database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation located in EPA Region 4. This region includes the following states: Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee.

**ICISNPDES** Integrated Compliance Information System National Pollutant Discharge Elimination System  
VERSION DATE: 07/09/17

Authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States.

**LUCIS** Land Use Control Information System  
VERSION DATE: 09/01/06

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

**MLTS** Material Licensing Tracking System

The Permit Compliance System is used in tracking enforcement status and permit compliance of facilities controlled by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act and is maintained by the United States Environmental Protection Agency's Office of Compliance. PCS is designed to support the NPDES program at the state, regional, and national levels. This database includes permitted facilities located in EPA Region 4. This region includes the following states: Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee. PCS has been modernized, and no longer exists. National Pollutant Discharge Elimination System (ICIS-NPDES) data can now be found in Integrated Compliance Information System (ICIS).

**RCRASC** RCRA Sites with Controls

VERSION DATE: 03/08/16

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities with institutional controls in place.

**SEMSLIENS** SEMS Lien on Property

The U.S. Environmental Protection Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs. This is a listing of SEMS sites with a lien on the property.

**SFLIENS** CERCLIS Liens

## FEMA - Federal Emergency Management Agency

The National Flood Hazard Layer (NFHL) data used in this report is derived from the Federal Emergency Management Agency. The NFHL dataset is a compilation of effective Flood Insurance Rate Map (FIRM) databases (a collection of the digital data that are used in GIS systems for creating new Flood Insurance Rate Maps) and Letters of Map Change (Letters of Map Amendment and Letters of Map Revision only) that create a seamless GIS data layer for United States and its territories. The NFHL is updated as new study or LOMC data becomes effective. Note: Currently, not all areas have modernized FIRM database data available. As a result, users may need to refer to the effective Flood Insurance Rate Map for effective flood hazard information. This data was provided by the Federal Emergency Management Agency's Map Service Center in November of 2013.

## US GEOLOGY

THE GEOLOGY DATA USED IN THIS REPORT ORIGINATES FROM THE USGS. THE FIRST STAGE IN DEVELOPING STATE DATABASES FOR THE CONTERMINOUS UNITED STATES WAS TO ACQUIRE DIGITAL VERSIONS OF ALL EXISTING STATE GEOLOGIC MAPS. ALTHOUGH A SIGNIFICANT NUMBER OF DIGITAL STATE MAPS ALREADY EXISTED, A NUMBER OF STATES LACKED THEM. FOR THESE STATES NEW DIGITAL COMPILATIONS WERE PREPARED IN COOPERATION WITH STATE GEOLOGIC SURVEYS OR BY THE NSA (NATIONAL SURVEYS AND ANALYSIS) PROJECT. THESE NEW DIGITAL STATE GEOLOGIC MAPS AND DATABASES WERE CREATED BY DIGITIZING ALREADY EXISTING PRINTED MAPS, OR, IN A FEW CASES, BY MERGING EXISTING LARGER SCALE DIGITAL MAPS.
